-

♦ Flow (User Journey)

1. User → Home Page → Explore Products
2. Product Detail → Add to Cart → Checkout
3. Payment → Order Confirmation → Download Product
4. Profile/Dashboard → See Purchases → Download anytime

Build a 100% responsive digital product selling website with adaptive layouts for both mobile and desktop.

Mobile View (Native App Experience):

- Use native-style UI components inspired by Material Design.
- Add an AppBar at the top with logo + menu.
- Add a Bottom Navigation Bar with 4 tabs: Home, Products, Cart, Profile.
- Each page should look like a native mobile app screen (full width cards, large touch-friendly buttons).
- Keep product cards scrollable in vertical list style.
- Use minimal, clean icons and native-style transitions.

Desktop View (Professional Website Experience):

- Show a professional responsive landing page with a navbar at the top (logo, navigation links, login/signup).
- Sidebar navigation (optional) for user dashboard after login.
- Product listing in a grid layout (3–4 products per row).
- Checkout and orders page styled like a modern eCommerce website.
- Keep typography and spacing professional for desktop readability.
- Ensure full responsive scaling: mobile → tablet → desktop.

General Requirements:

- Dark + Light mode support.
- Authentication pages (Login/Signup/Profile).
- Core user flow: Home → Product Listing → Product Detail → Cart → Checkout → Orders (Download).
- All elements (cards, buttons, inputs) should auto-adapt to screen size.
- Mobile-first design but scales perfectly on large screens.

- Smooth animations and modern styling for premium look.
